**RE: Monthly Progress Report – Water Main Design
TORX Facility – Rochester, Indiana
MACTEC Project No.: 3359-09-2469**

Dear Ms. Holz:

The purpose of this correspondence is to provide you with a summary of the water main design activities performed between April 21, 2010 and May 26, 2010. The design activities are in support of the proposed municipal water service extension from the City of Rochester, Indiana to the Acument (Torx) facility located at 4366 North Old US Highway 31. The project consists of performing a topographic survey for the project area (existing stubbed connection on the west side of North Old US Highway 31 near the Dean Food facility to the Torx facility), preliminary engineering, construction drawings and specifications, permit preparation, and construction bidding.

ACTIVITIES PERFORMED

The 30% design was completed and submitted to the City of Rochester for review and comment in early November 2009. Representatives from MACTEC and Textron attended a public meeting with the City of Rochester Water Board on May 10, 2010 to present calculations regarding optimal water main pipe line size. The City of Rochester's contract engineer provided a list during the May 10th meeting of anticipated operation and maintenance costs that the City may incur during the operation of the water main.

ACTIVITIES TO BE PERFORMED

MACTEC is evaluating the operation and maintenance costs and is working on a 75% design for the water main.

If you have any questions or comments regarding this correspondence, please call our office.

Sincerely,
MACTEC ENGINEERING AND CONSULTING, INC.
